Molecular cloning is a set of experimental methods in molecular biology that are used to assemble recombinant DNA molecules and to direct their replication within host organisms. The use of the word cloning refers to the fact that the method involves the replication of one molecule to produce a population of cells with identical DNA molecules. Molecular cloning generally uses DNA sequences ...

Rapid diagnosis of sexually transmitted infections in the clinic ensures treatment with the appropriate antibiotic. Trick et al . developed a cartridge-

based magnetofluidic polymerase chain reaction platform that detects *Neisseria gonorrhoeae*, the pathogen causing gonorrhea, in urethral swabs from patients within 15 min. This test simultaneously reported whether the strains detected are ...

A portable magnetofluidic platform for detecting sexually ...

A microorganism, or microbe, is a microscopic organism, which may exist in its single-celled form or a colony of cells.. The possible existence of unseen microbial life was suspected from ancient times, such as in Jain scriptures from sixth century BC India. The scientific study of microorganisms began with their observation under the microscope in the 1670s by Antonie van Leeuwenhoek.

This may be stable reference gene(s), or one of the alternatives, such as cell number, tissue mass, RNA/DNA concentration, an external spike 12, or a representative measure of the global expressed genes. Reference Gene Selection. Reference genes are targets whose quantity does not change as a result of the experiment.

PCR/qPCR Data Analysis - Sigma-Aldrich

The Western blot was originally intended to provide a yes/no answer about the presence of the target protein in a protein sample. This qualitative method confirms the presence of target bands by simple visual assessment [, , , ,]. With the surge in the field of systems biology and the need to understand complex biological systems, Western ...

A systematic approach to quantitative Western blot ...

Coastal countries have traditionally relied on the existing marine resources (e.g., fishing, food, transport, recreation, and tourism) as well as tried to support new economic endeavors (ocean energy, desalination for water supply, and seabed mining). Modern societies and lifestyle resulted in an increased demand for dietary diversity, better health and well-being, new biomedicines, natural ...
