### Biological Science Freeman Canadian Edition

This list of life sciences comprises the branches of science that involve the scientific study of life - such as microorganisms, plants, and animals including human beings. This science is one of the two major branches of natural science, the other being physical science, which is concerned with non-living matter. Biology is the overall natural science that studies life, with the other life ...

Heavy metals are generally defined as metals with relatively high densities, atomic weights, or atomic numbers. The criteria used, and whether metalloids are included, vary depending on the author and context. In metallurgy, for example, a heavy metal may be defined on the basis of density, whereas in physics the distinguishing criterion might be atomic number, while a chemist would likely be ...

In evolutionary biology, an organism is said to behave altruistically when its behaviour benefits other organisms, at a cost to itself. The costs and benefits are measured in terms of reproductive fitness, or expected number of offspring. So by behaving altruistically, an organism reduces the number of offspring it is likely to produce itself, but boosts the number that other organisms are ...

Popular science (also called pop-science or popsci) is an interpretation of science intended for a general audience. While science journalism focuses on recent scientific developments, popular science is more broad-ranging. It may be written by professional science journalists or by scientists themselves. It is presented in many forms, including books, film and television documentaries ...

In part, because of work on science and values in both feminist philosophy of science and philosophy of science more broadly, the early forms of feminist empiricism described in section 2.1 have evolved into an empiricism that acknowledges that values may play a role in science. This is reflected in a convergence of the two dominant Anglo ...

Of course, knowing that mitochondria and plastids evolved by endosymbiosis did not solve the problem of eukaryotic evolution, far from it. Forty years have passed since the first organellar sequence data were analyzed and there is still no consensus as to how the complex suite of eukaryotic features — nucleus, endomembrane system, cytoskeleton, mitosis, and so on — evolved from a ...

Ecology: . Bighead carp is a powerful filter-feeder with a wide food spectrum that grows fast and reproduces quickly (Xie and Chen 2001), which makes this species a strong competitor. The diet of this species overlaps with that of planktivorous species (fish and invertebrates) and to some extent with that of the young of virtually all native fishes.
