Introduction On July 14, 2020, Microsoft released a security update for the issue that is described in CVE-2020-1350 | Windows DNS Server Remote Code Execution Vulnerability. This advisory describes a Critical Remote Code Execution (RCE) vulnerability that affects Windows servers that are configured to run the DNS Server role.

Windows DNS Server Remote Code Execution Vulnerability
Maintaining DNS records can be very challenging if it is done manually. That is why Microsoft DNS servers allow dynamic DNS updates but this needs to be enabled with caution as it needs to be done in a secure way. This Wiki article explains how DNS updates can be secured on Microsoft Windows DNS servers. DNS records could be static or dynamic.

How to Secure DNS Updates on Microsoft DNS Servers ...
Flush DNS is a command which helps to clear outdated or corrupted DNS resolver cache. As your computer automatically caches IPs and other DNS results to make subsequent requests to the same hostname faster, it might also cache some old or bad results. As a consequence, you might not be able to communicate with hosts properly.

Understanding DNS - Beginners Guide to DNS. DNS (Domain Name System) is one of the most important technologies/services on the internet. as without it the Internet would be very difficult to use. DNS provides a name to number (IP address) mapping or translation, allowing internet users to use, easy to remember names, and not numbers to access resources on a network and the Internet.

Understanding DNS - Beginners Guide to DNS
The best free public DNS servers include Google, Quad9, OpenDNS, Cloudflare, CleanBrowsing, Verisign, Alternate DNS, and AdGuard DNS. Here's a quick reference if you know what you're doing, but we get into these services a lot more later in this article: A list of additional free DNS servers can be found in the table near the bottom of the page.

Free and Public DNS Server List (Valid September 2020)
In the Domain Name System Microsoft Management Console (DNS MMC), right-click the current DNS server, and then click Properties. Figure 1-1: Domain Name System Microsoft Management Console. Select the Debug Logging tab and enable the below checkboxes. Log packets for debugging.

Accenture Security : Quick Start Guide for Microsoft® DNS
This quickstart walks you through the steps to create your first private DNS zone and record using the Azure portal. A DNS zone is used to host the DNS records for a particular domain. To start hosting your domain in Azure DNS, you need to create a DNS zone for that domain name. Each DNS record for your domain is then created inside this DNS zone.

Quickstart - Create an Azure private DNS zone using the ...
To configure Microsoft DNS, follow the steps below. Navigate to the Domain Name System Microsoft Management Console using below path. For Microsoft Server 2008 and 2008 R2, Go to Start Menu > Program Files > Administrative Tools > DNS Manager. For Microsoft Server 2012 and 2012 R2, Go to Start Menu > Administrative Tools > DNS Manager

DNS-over-HTTPS (DoH) allows DNS resolution to be performed via the HTTPS protocol rather than through the normal plain text DNS lookups. ISPs tend to block your connection to sites by monitoring...

How to enable DNS-over-HTTPS (DoH) in Windows 10
Like the DNS records for SPF, the record for DMARC is a DNS text (TXT) record that helps prevent spoofing and phishing. You publish DMARC TXT records in DNS. DMARC TXT records validate the origin of email messages by verifying the IP address of an email's author against the alleged owner of the sending domain.

Use DMARC to validate email - Office 365 | Microsoft Docs
In essence, DNS is simply a database that links meaningful names (known as host names), such as http://www.microsoft.com, to a specific IP address, such as 192.168.124.1. Simply linking addresses to names is just the beginning, though, because DNS has many more features in addition to host-name-to-address mapping.

DNS: What It Is and What It Does - dummies
To add a DNS server in the Control Panel: Go to Network and Internet -> Network and Sharing Center -> Change adapter settings. Right click on the connection you want to add a DNS server to and select Properties. Select either "Internet Protocol Version 4 (TCP/IPv4)" or "Internet Protocol Version 6 (TCP/IPv6)" and click Properties.
