### Calibration

called an engine control module (ECM) is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps

Calibration

Engine calibration has been moving in the direction of using RSM DoE with online automated testing, dynamic mapping, and offline optimization, as summarized by the MathWorks hosted SAE Panel Discussion (The MathWorks, 2007). Moreover, the powerful approach proposed earlier by using the two-dimensional minimum BSFC contour maps
