In mathematics, a Fourier transform (FT) is a mathematical transform that decomposes functions depending on space or time into functions depending on spatial or temporal frequency, such as the expression of a musical chord in terms of the volumes and frequencies of its constituent notes. The term Fourier transform refers to both the frequency domain representation and the mathematical ...

I think Ross' Elementary Analysis: The Theory of Calculus is a good introductory text. It's very simple and well explained, but not quite at the level of Rudin's Principles of Mathematical Analysis (for example, everything is done using sequences in Ross, versus a general topological setting for open and closed sets in Rudin).
