The Linux kernel is a free and open-source, monolithic, modular, multitasking, Unix-like operating system kernel. It was conceived and created in 1991 by Linus Torvalds for his i386-based PC, and it was soon adopted as the kernel for the GNU operating system, which was created as a free replacement for UNIX. Since then, it has spawned a large number of operating system distributions, commonly ...

### **Linux kernel - Wikipedia**

Linux is a name which broadly denotes a family of free and open-source software operating system distributions built around the Linux kernel. The Linux kernel, an operating system kernel which all Linux distributions use, was first released on September 17, 1991 by Linux Torvalds. Many Linux distributions use the word
