There are many terms at play when discussing picture quality and its various aspects. Though many of... Getting ready. Before we launch into ...

How to Calibrate Your TV | Digital Trends
Extruder calibration is crucial to FDM 3D printing for many reasons. The point of extruder calibration is to ensure your printer is pushing exactly the right amount of filament through the hot end during a print. Too little filament and a part will have gaps between layers, or the layers themselves will be weak or missing.

Calibration Guide Topcon RL-H5B. Calibration guide and instruction for the Topcon RL-H5B rotating laser level. Note the 5B model is a more basic version of the 5A model. Calibration for the 5B model is, however, different from its brother. If you are looking for instructions for the 5A model you can check it out HERE. On this post, you will also find a brief review of these models build quality and photos of the internal mechanism.

Calibration Guide - Topcon RL-H5B - Laser Level Review
For a successful extruder calibration, the hotend needs to be set at the correct temperature according to the filament used. If you are performing the calibration using PLA filament, set a temperature of 195C. If using PETG, set a temperature of 225C. It's important to use a temperature close to what you normally use for printing.
