When an exponential equation cannot be rewritten with a common base, solve by taking the logarithm of each side. See Example $\{\{PageIndex\{5\}\}$. We can solve exponential equations with base $\{e\}$, by applying the natural logarithm of both sides because exponential and logarithmic functions are inverses of each other.

Exponential and logarithmic functions
The exponential function is one-to-one, with domain and range. Therefore, it has an inverse function, called the logarithmic function with base a . For any, the logarithmic function with base a , denoted, has domain and range, and satisfies if and only if.

5 INVERSE FUNCTIONS EXPONENTIAL, LOGARITHMIC, AND INVERSE TRIGONOMETRIC FUNCTIONS The common theme that links the functions of this chapter is that they occur as pairs of inverse functions. In particular, two of the most important functions that occur in mathematics and its applications are the exponential function $f(x) = a^x$ and its inverse function, the logarithmic function $g(x) = \log_a x$.
