OK bit of an update on this. I started to worry as it was taking a while to sync up. Although as long as you have your Primary data set to Primary on the sync there is nothing to worry about, you just let it take its time. When sync'ing is finished, you will get event logs telling you that each namespace is now fully sync'd.

Is it ok to manually copy files to non-primary DFS ...

Once a file is transferred, the job deletes the file. I think, in this case it would be safe to delete the files manually from the directory. 2. Upon commit a new config file is created for transfer and a list is updated with the new file name. The archival job parses this list and transfers the listed files.
