Mass Versus Weight

Video Tutorial - The

Physics Classroom

Many students of physics confuse weight with mass. The mass of an object refers to the amount of matter that is contained by the object; the weight of an object is the force of gravity acting upon that object.

Unbalanced forces cause objects to accelerate. But not all objects accelerate at the same rate when exposed to the same amount of unbalanced force. Inertia describes the relative amount of resistance to change that an object possesses. The greater the mass the object possesses, the more inertia that it has, and the greater its
