The way we understand and make sense of variation in the world affects decisions we make. Part of understanding variation is understanding the difference between deterministic and probabilistic (stochastic) models. The NZ curriculum specifies the following learning outcome: "Selects and uses appropriate methods to investigate probability situations including experiments, simulations, and ...

#5 He discovered the three Ramanujan's congruences. Related to the Partition Theory of Numbers, Ramanujan also came up with three remarkable congruences for the partition function  $p(n)$ . They are  $p(5n+4) \equiv 0 \pmod{5}$ ;  $p(7n+4) \equiv 0 \pmod{7}$ ;  $p(11n+6) \equiv 0 \pmod{11}$ . For example, the first congruence means that if an integer is 4 more than a multiple of 5, then number of its partitions is a multiple of 5.
