In summary, this lab displays that the change in momentum of an object in motion is equal to the impulse on that object. As the car rolled down the track in the positive direction, it had a positive momentum, and the tension then increased in the elastic cord, pulling the car in the negative direction and changing its momentum from positive to negative.

Vernier Caliper 1) It decreases the uncertainty of the measurement by calculating the average value. Multiple measurements attribute to a more precise average value. 2) The smallest division on the Vernier caliper corresponds to 1mm. 3) The error for each measurement is one half of the least count ($\pm 0.01\text{mm}$).
