### How to Fix a Refrigerator: Refrigerator Troubleshooting ...

Clean the condenser coils with a vacuum or brush. This part helps dissipate heat, and if it's too dirty, the refrigerator will have to work harder to stay cool. This cleaning should be done with the appliance turned off. You should clean rear-mounted coils once a year, and floor coils twice a year.

### 5 Ways to Diagnose Refrigerator Problems - wikiHow

The second most common cause for a Whirlpool refrigerator not cool is a defective door seal. If the door seal is loose or damaged, your fridge won't cool properly. The door seal ensures the cold air inside the refrigerator is locked inside rather than leaking into your kitchen. Check the door seal for damage, gaps, or other defects.
